

PERFICLEAN

Automatic Cleaning System (CIP)

CAPACITIES

On request

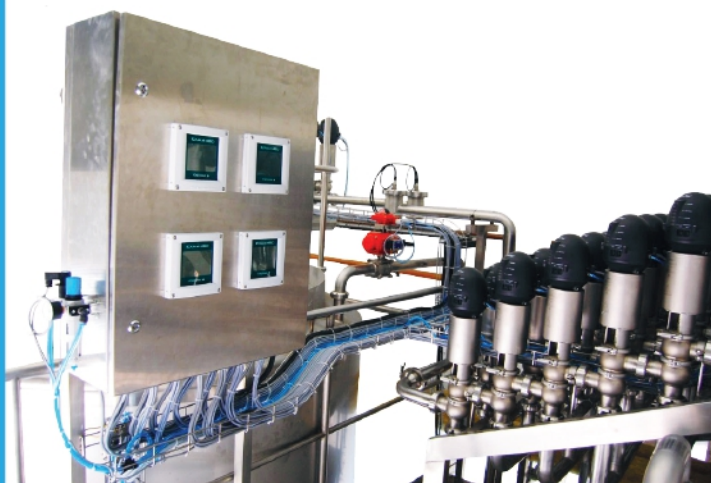

PERFIPROCESS

by PERFINOX | www.perfinox.pt

CONCEPT

The Clean-In-Place (CIP) Cleaning System is a cleaning method of the internal surfaces of piping's, tanks, process equipment and their respective accessories, without the need to perform any disassembling.

ADVANTAGES

- Reduction of operation costs
- Increase of available time for product processing
- Reduced sewage consumption
- Quick return on investment
- Reduced water consumption
- Efficiency improvement and reduction of cleaning cycles time
- Reduction disinfectant consumption
- Recorded historical of the entire procedure
- Modular integration of this system with others
- Execution and control via Internet, PDA or touchscreen
- Maximum control and significant environmental cost reduction

CAPACITY

On request, depending on the quantity and size of objects to be cleaned, simultaneity and CIP cycles.

PRODUCT RECOVERING SYSTEM (PIG)

- Product recovery at the end of each production cycle
- Product waste reduction
- CIP costs reduction
- Rapid switch between different products
- Integration with the CIP cleaning system
- Monitorization and control with supervision system
