

BIO PULSE

AI-Powered Blood Pressure Estimation App

5 February Dubai exhibition center In a breakthrough innovation in health technology, BioPulse is proud to announce the launch of its AI-powered blood pressure estimation app.

This revolutionary application offers a seamless and accessible solution for blood pressure monitoring, eliminating the need for traditional cuff-based devices and enabling users to measure their blood pressure anytime and anywhere using only their smartphone.

BioPulse leverages cutting-edge AI technology to analyze luma light changes from a fingertip video captured using a smartphone camera and flashlight. With a simple process—placing a finger on the camera and tapping "Start BP Test"—users receive accurate systolic (SBP) and diastolic (DBP) blood pressure readings in seconds.

Key Features of BioPulse:

- ✓ **Accessibility:** Requires no additional devices, making it suitable for everyone with a smartphone.
- ✓ **Convenience:** Users can measure their blood pressure anywhere, anytime.
- ✓ **Innovation:** Utilizes AI-driven technology to ensure reliable and precise results.

BioPulse is ideal for individuals aiming to stay health-conscious or those with ongoing medical needs requiring regular blood pressure monitoring. Whether for tracking daily health or supporting long-term wellness goals, the app offers a user-friendly and efficient solution.
