

Press Pitch: Kyrgyz Republic at GITEX Global 2025

The Kyrgyz Republic is bringing its unique success story and cutting-edge companies to GITEX Global 2025.

We invite you to cover our story, gain exclusive interviews, and explore collaboration opportunities with one of the world's most dynamic emerging IT hubs.

Why the High Technology Park of the Kyrgyz Republic matters as a case

The Kyrgyz Republic is fast emerging as one of the most dynamic digital economies worldwide. Without oil or gas to rely on, the country turned the internet into its “new Silk Road,” exporting IT services to 63 countries. Today, tech exports contribute significantly to the national budget, with growth accelerating year on year.

At the heart of this transformation is the High Technology Park of the Kyrgyz Republic (HTP) — a government-backed zero-tax zone for IT. Residents pay 0% VAT, 0% profit tax, 0% sales tax. Add to that rapid company registration, access to skilled and affordable talent, and the Digital Nomad Visa (up to 10 years of legal stay).

HTP unites around 500 companies across software, fintech, gaming, AI, and creative industries. At GITEX Global 2025, HTP brings a delegation of five standout companies — each ready to share unique insights and expertise:

Who we are bringing to GITEX

At GITEX 2025, the Kyrgyz Republic will showcase **five standout companies** — each with expertise and stories ready for media coverage:

IPROFI.PRO — The first national **ERP** developer from the Kyrgyz Republic, **challenging SAP** and Oracle with IPROFIERP. They created a product that does not compromise on quality and flexibility but **comes at a much lower price**.

Their second product, **IPROFIMED**, is a **healthcare system that fully automates clinic operations** — appointments, call management, patient records — everything runs automatically. On top of that, its **AI assistant helps doctors by supporting diagnosis** with real-time image analysis.

💡 Expert insights: The future of ERP in fast-growing markets; How AI can assist — not replace — doctors; Building tech sovereignty outside Big Tech

Deal Drive — A fintech that built the **most accurate tool for evaluating used cars**. Unlike others, it looks at the entire market in one place — classifieds, websites, and auctions — and combines live data with historical data from ads that disappeared. It also factors in mileage, condition, year, and more. That's why top players like **Cars24, Alba Cars, and Linda Cars** already work with Deal Drive and call it a game-changer.

💡 Expert insights: The future of automotive retail; Why real-time + historical data transforms pricing; From SaaS tools to full ecosystems in mobility tech.

Operavix — A software platform built on **Task Mining technology**. In simple words, Task Mining records **how employees actually work on their computers** — every click, window, and action. It then shows where time is wasted, what tasks are repeated, and where automation can save money. This helps companies see their real processes, not just what's written in manuals, and improve them fast.

💡 Expert insights: What Task Mining is and why it matters; How to spot “invisible” inefficiencies inside companies; The next wave of business process automation.

PetaByte — Building web services, mobile apps, and **enterprise systems with AI**, cloud, and process automation at the core. Mission: not just code, but create a digital future for everyone.

💡 Expert insights: Democratizing digital transformation; Making digital ecosystems user-friendly; How SMEs can benefit from AI on a budget.

EvoSkyGeo — Developer of the LOCAVIST platform and mobile apps **for transport and workforce monitoring**, as well as **fuel control**. The platform already supports more than 500 different device models worldwide, and any new device can be integrated if not yet supported. For businesses in transport monitoring and fuel management, EvoSkyGeo provides a powerful analytical platform plus mobile apps that deliver real-time tracking of vehicles and staff, route and mileage control, driver behaviour and dangerous manoeuvres, monitoring of auxiliary equipment, fuel refills and drains, engine hours, temperature, panic button alerts, API integrations, and advanced reporting with tables and graphs.

📌 Expert insights: The future of smart mobility; How real-time monitoring and analytics transform transport and logistics; The role of telematics in building safer and greener operations.

HTP and its companies are open for media interviews — both with leadership and product founders. For everyone's convenience, we can arrange interviews in advance or discuss **any other collaboration** formats you may prefer.

We are also **ready to prepare high-quality materials ourselves** if we agree on the topic, format, and details — our team has extensive experience in content creation, and we will do this free of charge.
