BPC Energy Ltd - Proud exhibitors at **GITEX GLOBAL 2025**

The British Power Conversion Company is an international company offering an innovative range of power protection products and services across a broad range of industries and sectors.

For almost 30 years, BPC Energy has been growing and now offers an extensive range of solutions for the Computer, Telecom, Data Centre, Emergency Lighting, Industrial, and Three Phase sectors. These include Modular UPS, Static Emergency Lighting Systems, Medical Isolated Power, Long Runtime Inverters, Static Transfer Switches, as well as PV Solar and associated products.

BPC Energy Ltd is set to unveil a series of new products at this year's Middle East Energy exhibition, expanding their existing product line. Among the highlights is the introduction of the PowerPrime three-phase input and output UPS, offering a high-specification system at a lower cost. Additionally, the new PowerStor PSLW Battery Range, designed for medium rate discharge applications necessitating extended autonomy, adheres to Eurobat's stringent quality standards, providing exceptional value for various UPS installations. This range features multi-alloy grid construction with high corrosion resistance, superior charge acceptance, UL-94 flame retardant options, and remarkable deep cycle discharge capabilities. Moreover, the PowerGem Plus RT V3 boasts the latest DSP technology and enhanced functionalities tailored for IT managers with stringent requirements.

Our new PowerPrime battery cabinets provide secure storage and charging for batteries used in a BPC Energy uninterruptible power supply (UPS) system. The batteries are typically sealed and maintenance-free and are either mounted on shelves within the UPS cabinet or housed in an external cabinet. Visitors can also anticipate a showcase of Solar Inverter products, outdoor enclosure designs, the introduction of our new UPS battery cabinets, and much much more to look forward to will be displayed, so come and meet the BPC team to find out more about how we can support your business continuity needs.

Our devotion to excellence is reflected in the enduring quality of our products which is matched with an equally lasting commitment to customer care.

BPC Energy also offer fully specialised and flexible training courses led by highly experienced and knowledgeable engineers for any requirement, from new product training to bespoke general UPS topology subjects. This includes high quality CPD approved training courses which can be held at BPC's comprehensive headquarters in the UK, or at customer sites covering all aspects of theory and practical, hands-on training.
