

## **APRYSE TO DEMONSTRATE NEXT-GEN DOCUMENT PROCESSING TOOLS AT GITEX GLOBAL 2025 IN DUBAI**

**Dubai, UAE, 13–17 October 2025, Dubai World Trade Centre**

Apryse will exhibit at GITEX GLOBAL 2025 to showcase its document-processing tools and developer SDKs, demonstrating how organizations can securely view, edit, convert, and sign documents within their own applications.

Built for fast integration, Apryse's SDKs and prebuilt components enable teams to embed high-fidelity viewing, secure redaction, conversion, and e-signature workflows with minimal development effort. Throughout the show, Apryse will host live demos and product walkthroughs of WebViewer and its PDF/Document SDK capabilities, highlighting real-world use cases across various industries and partner ecosystems. Visit Apryse at booth H26-C60.

"GITEX GLOBAL is a premier technology event, and we're thrilled to showcase Apryse's developer-first document solutions to the region," said Simon Williams, VP of Sales at Apryse. "Attendees will experience firsthand how our SDKs accelerate integration, streamline document workflows, and safeguard content, enabling organizations to drive digital transformation with greater speed, efficiency, and confidence."

Following Apryse's participation at GITEX Europe in Berlin earlier this year, the team is especially eager to engage with regional customers, systems integrators, and partners at GITEX GLOBAL. Apryse's solutions are particularly well-suited to organizations prioritizing security, compliance and a best-in-class user experience for document workflows.

What to expect at the booth:

- Live demos and product walkthroughs of Apryse WebViewer and PDF/Document SDKs
- Use-case discussions spanning finance, government, healthcare, construction, and other industries
- Product specialists available for technical Q&A, integration planning and trial discussions
- And as always, some cool Apryse swag and raffle giveaways

### **About Apryse**

Apryse provides enterprise document processing technology, SDKs, prebuilt components and end-user applications that let organizations generate, convert, view, edit and sign documents within their own applications and deployments. Thousands of organizations, including startups, governments and large enterprises, use Apryse technology to embed secure, high-fidelity document workflows.
