

FixDrive Launches AI-Powered Mobility Platform at Expand North Star 2025

Axivion LLC introduces a fair, transparent, and scalable ride-hailing solution designed for global growth.

Dubai, UAE – September 2025 – Axivion LLC proudly announces the launch of FixDrive, an innovative mobility platform set to transform the ride-hailing experience for both riders and drivers.

Today’s mobility market faces critical challenges: unpredictable pricing, high commissions, and low driver loyalty. FixDrive directly addresses these pain points by introducing a fair and transparent business model. Riders benefit from predictable fares and trusted drivers, while drivers receive daily payouts, reduced commissions, and long-term client relationships.

At the core of FixDrive is an AI-powered matching system, ensuring that riders are connected with the best available drivers based on proximity, rating, and service class. This advanced technology optimizes efficiency, reduces waiting times, and builds stronger trust between riders and drivers.

Designed for global scalability, FixDrive operates on a franchise model that balances local adaptability with consistent international service quality. This ensures rapid expansion into new markets while maintaining high standards of safety, fairness, and sustainability.

“Our mission is to build a sustainable and fair mobility ecosystem where both riders and drivers thrive,” said Nijat Guliyev, CEO & Founder of Axivion LLC.

“FixDrive is not just another ride-hailing app — it’s the future of trusted, AI-driven mobility.”
