

Milerd brings proof-driven Safety Tech to North Star 2025

Detoxer, EcoTracker and HiRange convert invisible risks into clear, science-backed actions.

Dubai, UAE, October 2025. Milerd, a premium brand in consumer environmental safety, is showcasing a portfolio that makes safety measurable in everyday life. The company will present **Detoxer** for rapid food purification, **EcoTracker** for instant nitrate and water quality checks and **HiRange** for professional EMF exposure monitoring

including 5G. Each device is designed for decisions you can act on in homes, cafés, workplaces and field operations.

Detoxer removes up to **99%** of pesticides and bacteria in validated test scenarios. Performance is confirmed by independent medical laboratories.

EcoTracker provides fast nitrate readings for fruits, vegetables, fish and meat and adds TDS and pH for water. The product was successfully backed on Kickstarter, signaling strong demand.

HiRange delivers fast, readable EMF insights across low and high frequencies including 5G. Its compact form suits police, customs and safety officers as well as inspectors and businesses.

RnDWo, Milerd's internal R&D Workflow Foundry, powers end-to-end development from concept to certified scale with more than 15 years of engineering heritage and launches across global markets. This foundation enables Milerd to move from idea to market with quality control and compliance readiness.

"Safety should feel effortless and be backed by proof," said **Anastasia Perebeinos**, CMO at Milerd. "We build devices that turn uncertainty into clarity you can trust."

About Milerd

Milerd designs premium devices that make environmental safety measurable for everyone. Learn more at **milerd.com**.

About RnDWo (a Milerd division)

RnDWo is Milerd's in-house R&D foundry that delivers certified, scalable hardware from idea to market. The release aligns with the current pitch materials and product line presented in our deck. Learn more at **rndwo.com**
