STATE-OF-THE-ART PRODUCTION

We use bottling plants made by leading manufactures KRONES & KHS. Thanks to our four can-lines, four PET-lines, we offer an enormous range of services with high filling quantities. Together, our bottling and canning plants can process an impressive 200.000 units per hour.

AUSTRIAN SOURCES. AUSTRIAN WATER.

Austria stands for the best quality water, be it flowing or standing. The Starzinger Beverage Group relies on crystal-clear water from **4** mineral water springs from Austria, which cover a wide range from low mineralisation and taste neutrality all the way to high mineralisation.

THE SOURCE OF QUALITY.

our sustainability agenda

Managed in 5th generation and still fully family owned, the Starzinger Beverage Group is a 117-year-old traditional Austrian family company.

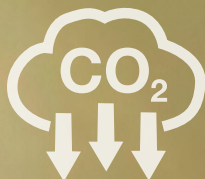

Our 15.00m² photovoltaic system will perform up 2.500kWp upon conclusion, which corresponds a retrenchment of 45% of all electricity.

By switching to 100% green electricity, we were able to save over 2,500 tons of CO₂ emissions in one year.

We rebuild our hydroelectric power station into a small-scale plant with 3 turbines.

Our CO₂ emissions footprint is a key performance indicator that we minimize in all scopes. This goal has already required intensive investments in the areas of packaging and energy management.

All materials such as aluminum, (W)PAP, LDPE, PET, PE pr OPP are purchased directly from the manufacturer and without exception, are recycled either by us or selected partners. The proportion of materials reused in each case largely determines how we work with our suppliers.

With an increasing share in refillable glass of 30% in the mineral water sector, the Starzinger Beverage Group has remained on the forefront.

We have proudly transitioned to electric vehicles and we are equipped with 8 E-Chargers.

As a matter of course our PET bottles are 100% recyclable.
