

# Fruit Juice Solutions

Expert in pure taste & rich flavor

NFC  
CONCENTRATES  
PUREES

ORGANIC &  
CONVENTIONAL

Your trusted partner

At CHB Group, we bring you the finest Greek fruit purees, and concentrates, crafted exclusively from hand-picked, premium-quality fruits. Our extensive range includes some of the most sought-after products in the market: peach puree, apricot puree, kiwi puree, strawberry puree, orange juice concentrate, pomegranate juice concentrate, and many more.

## Our Juice Concentrates

Our Fruit Juice Concentrates — whether clear or cloudy — are expertly produced by gently removing water through evaporation. This process ensures superior shelf life and storage efficiency, making them ideal for a wide range of applications.

## Our Fruit Purees

Our Fruit Purees retain the authentic flavor, aroma, and mouthfeel of the original fruit. Carefully prepared by removing skins and seeds, they are the perfect choice for creating delicious juices, nectars, smoothies, and more. We offer both single-strength and concentrated purees to meet diverse production needs.

## Fruit Juice Concentrates & NFC

In addition, CHB Group provides top-quality NFC (Not From Concentrate) Juices, such as freshly pressed orange juice, for brands seeking the purest and freshest fruit experience.

With CHB Group's fruit ingredients, you can count on exceptional flavor, natural nutrition, and consistent quality — every time.

## Fruit Purees & Concentrates

# We are processing 15 Greek fruits

Greece is primarily considered as a fruit producing country. Fruit should be included in the daily diet to help the body stay fit and healthy. It is nature's wonderful medicine with unique nutrition packed with vitamins, minerals, antioxidants and many phytonutrients.

CHB Group owns two plants which are located right in the heart of Greece's fruit production areas — in Nafplio, Argolis, and Koufalia, Thessalonikis. This strategic positioning gives the company a significant advantage by ensuring quick access to fresh fruit. The harvesting and juicing process is carried out within the shortest possible time in order to retain the unique characteristics of each fruit and guarantee the freshness of the final products.

# Quality

## Laboratories

Quality control laboratories play an important role in the products' quality assurance system. The specialized scientists of CHB Group having the latest technologically updated equipment, conduct integrated chemical and microbiological tests on the company products. In addition, Statistical Process Control ensures the constant quality of products, according to the industry standards and specifications.

## Quality control

Quality control is performed in all stages of the production and delivery process in order to ensure the final product quality. It starts from the fruit inflow in the plants, continues through all stages of processing, storage and delivery of the final product to the customer.

## R&D

Always giving particular attention to innovation, CHB Group has an ultramodern Research and Development department, established by skilled scientists (chemists, agriculturists, chemical engineers, food technicians, biologists, etc.) who are responsible for the development of all new blends and juice bases, flavors and fruit preparations.

CHB Group has two different R&D teams, one specializing in Juices, Compounds and Blends and another solely for the Fruit Preparation products.

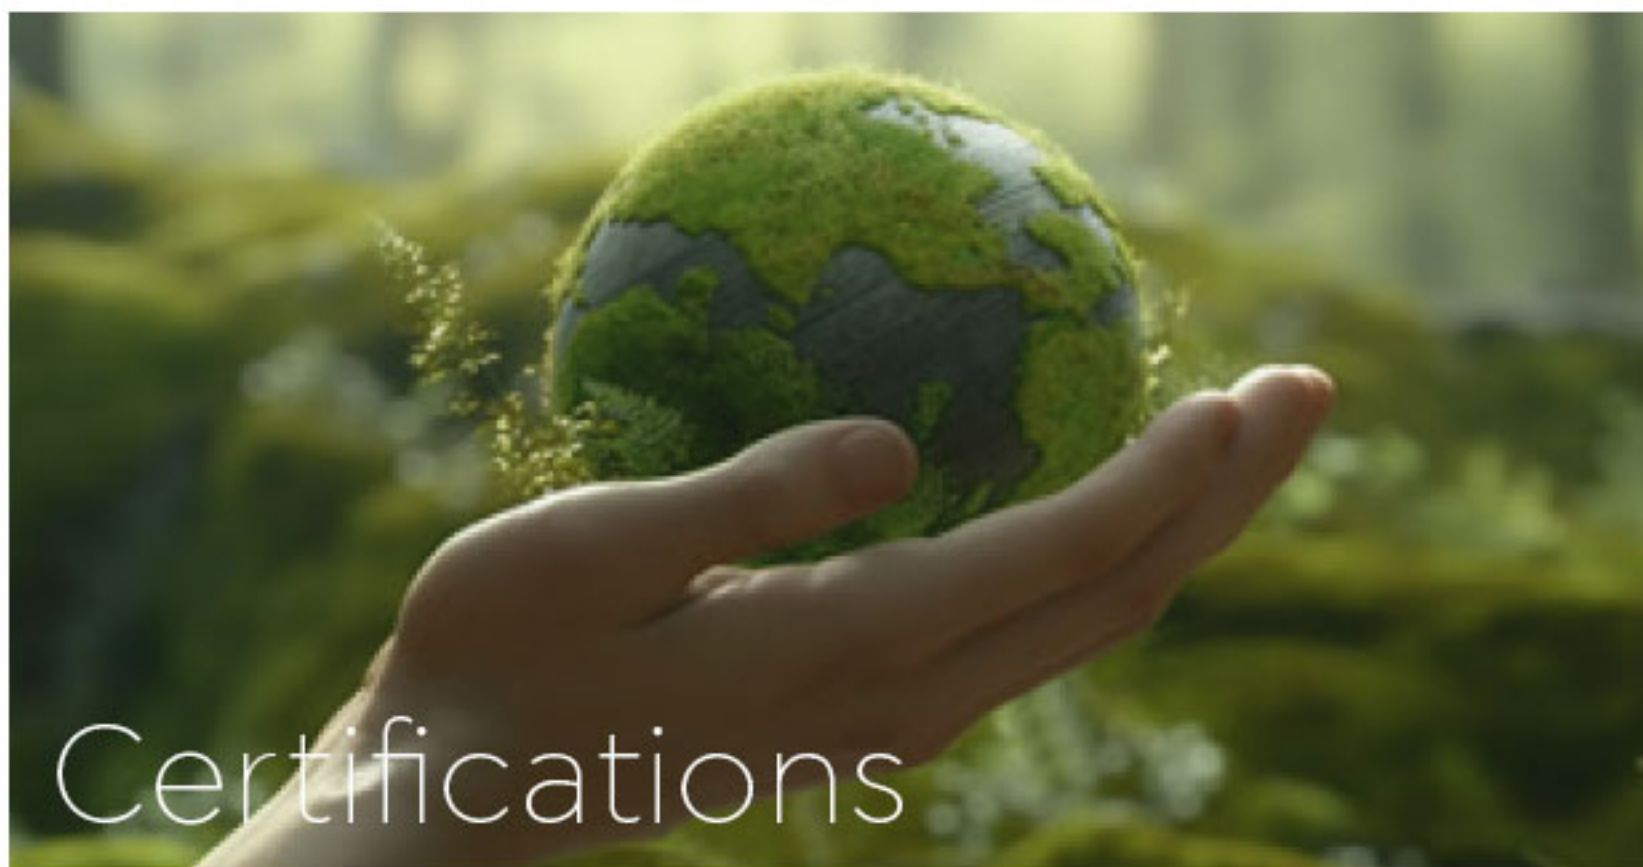

## Know-how

The Research and Development team collaborates with an extensive network of universities and businesses worldwide, in an effort to generate new ideas and innovative products.

## Taste tests

The aim of CHB Group is to produce healthy products of high quality that will stand out not only for their high nutritional value, but also for their unique taste. Before these products reach the final consumer, they are continually subjected to detailed and strict checking by the scientific staff of our Quality Control department, in order to ensure consistent and optimum quality.

## Certifications

# What is Sustainability for us and its impact in the Value Chain

## Our approach to sustainability encompasses:

### Near-Zero Waste:

We are dedicated to achieving near 100% reuse of agricultural raw materials. We also aim to 100% recycling of our waste every year and we have achieved 100% liquid waste management.

### Eco-Friendly Technologies:

We embrace low-emission technologies to shrink our environmental footprint. More specifically, we have installed **solar panels of total 3 megawatts (MW) capacity** on the rooftops of our production units in Nafplio and Koufalia, achieving **-12% reduction of greenhouse gas emissions** each year.

### Stakeholder and Community Focus:

We place great importance on our stakeholders and the communities we operate in. As part of this commitment, we actively support local events and organisations and donate products or financial support to schools, hospitals, NGOs, sports events and people in need.

### Long-Term Partnerships:

Sustainability is a shared effort. For 70 years, we've partnered with 3,000 small growers who prioritize sustainability. Recently, we renovated an agricultural educational center in Nafplio to help them adopt more sustainable farming practices.
