Manufacturer of tomato paste and fruit puree production lines

WWW.MSGCO.CO

Introducing the company

MSG Company, with the brand name ASHOORI, has been a leader in the design and manufacture of complete machinery for tomato paste and fruits puree production lines since 1989, relying on Iranian engineering knowledge, experience, and creativity.

From the precise receiving and sorting line to advanced dehydration, concentration, and pasteurization systems, each machine is the result of years of effort and innovation.

We believe that quality is not a coincidence, but rather the result of precision, experience, and love for manufacturing. We do the best, for those who want the best.

Capacity

Evaporator 800 Tons

Features and Benefits of Product Receiving and Washing Systems

- Easy product unloading: Reduces manpower and time required for product transfer.
- Product quality preservation: Prevents damage to pieces or product texture during unloading.
- Energy optimization: Less energy consumption compared to traditional unloading methods.
- Truck bed installation: High flexibility and ability to be used in different production lines.

Features and Benefits of our Continuous and automatic concentration

Continuous and automatic concentration: without manual intervention and reducing manpower.

Design methods: Falling Film or free fall, while maintaining the natural color and properties of the product.

Temperature and vacuum control: preventing product contact with oxygen and body, maintaining quality and taste.

High efficiency: Using a barometric condenser, high-efficiency cooling water outlet and the need for minor repairs

Features and Benefits of our Turbo Extractor

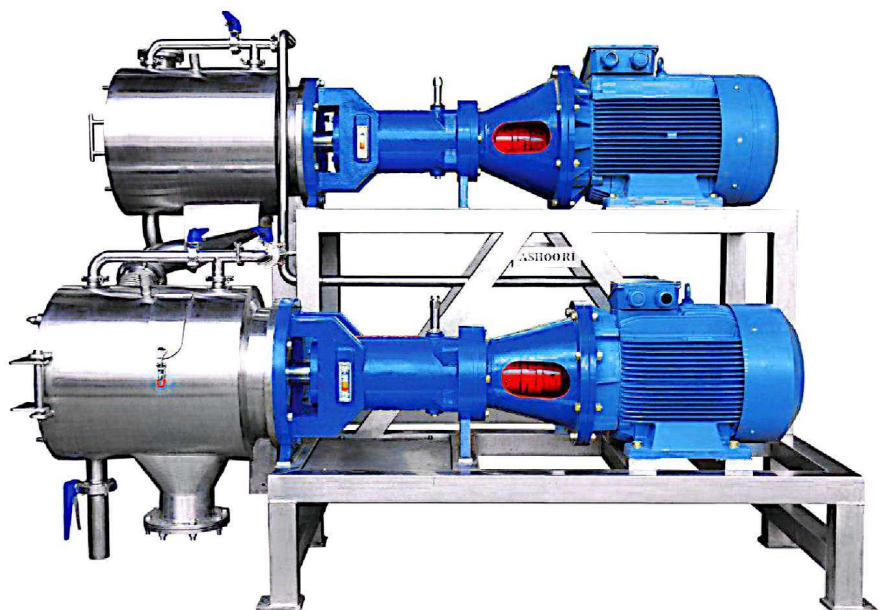

- Multi-stage and flexible: Single-stage, two-stage or three-stage design according to production needs.
- Product quality maintenance: Precise and tested design ensures that large product parts are less broken and high-quality puree are obtained.
- Fast-rotating cylindrical cavities: Creating uniform rotation inside the cylinder causes controlled explosion of the product and its complete dispersion.
- Integrated and stable operation: Uniform dispersion of materials in the cavities ensures stable performance, high strength and excellent movement of the device.
- Increased production efficiency, High rotation speed and optimized design reduce waste and increase extraction efficiency.

This company is the first manufacturer of double vacuum extraction turbos in different sizes, capacities and models: AT15 - AT20 - AT25 - AT30

The latest invention of this company is the manufacture of turbo extraction by placing two impellers and a small and large mesh on one axis. The mesh used in the first stage is made of larger springs and the second stage is made of smaller springs. This causes the product to soften in the first stage and a lighter load is transferred to the second stage.

This company is the only supplier of all imported turbo parts.
