SYSTEM INTEGRATION

As a system integrator, we take a holistic view of the production facility as a whole. Together, we search for the optimal interpretation, arrangement and system architecture. The goal: maximum output and efficiency and minimum downtime in the smallest possible space. We integrate all machines and systems for all process steps in one complete production line, in one system that is automated as far as possible, from specification to service, from product intake to packaging. And from machines and systems to the complete control and automation.
