Smoothwall Lacquered containers

EN Contital Lacquered Smoothwall containers are perfect for packaging high quality ready to cook convenience products including red meat, poultry, fish, vegetables, BBQ food and dessert. Containers have a smooth rim that can be lidded with film to provide a leak proof pack for food preservation over a long shelf life. They can also be lidded with our own range of plastic clip-on lids.

The corrugated bottom ensures greater rigidity and increases the circulation of hot air improving the cooking of products with a high moisture content.

Lacquering not only enhances the aesthetics of containers, but offers important advantages:

- Increased corrosion resistance against food types with a pH level outside the range 4-9
- Shelf life extension can be increased by applying lacquers which improve seal integrity with either flexible plastic films or aluminium lids
- Packaging of foods subjected to retort pasteurization and sterilization processes

FR Les conteneurs à paroi lisse laqués Contital sont parfaits pour le conditionnement de produits prêts à cuire de haute qualité, notamment la viande rouge, la volaille, le poisson, les légumes, les aliments pour barbecue et les desserts. Les conteneurs ont un bord lisse qui peut être recouvert d'un film afin de fournir un emballage étanche pour la conservation des aliments pendant une longue durée de vie. Ils peuvent également être fermés par notre propre gamme de couvercles à clipser en plastique

Le fond ondulé assure une plus grande rigidité et augmente la circulation de l'air chaud, améliorant ainsi la cuisson des produits à forte teneur en humidité. Le laquage n'améliore pas seulement l'esthétique des récipients, mais offre des avantages importants :

- Une résistance accrue à la corrosion contre les types d'aliments dont le pH se situe en dehors de la fourchette 4-9
- La durée de conservation peut être prolongée en appliquant des laques qui améliorent l'intégrité du joint avec des films plastiques flexibles ou des couvercles en aluminium.
- Emballage des aliments soumis à des processus de pasteurisation en autoclave et de stérilisation

Food Delivery & Take Away

Lacquered containers | Conteneurs laqués

EN Aluminum trays protect food from light, humidity and contaminants while preserving its taste and aroma. Thanks to these features, they are an excellent solution for cold and hot take-away foods.

FR Les barquettes en aluminium protègent les aliments de la lumière, de l'humidité et des contaminants tout en préservant leur goût et leur arôme. Grâce à ces caractéristiques, elles constituent une excellente solution pour les aliments froids et chauds à emporter.
