

PACKAGING THAT IMPROVES
YOUR **BUSINESS.**

TOPSYL

is an exclusive patent of **Ecocap's.**

ecocap's

REVOLUTIONARY BY VOCATION

Our company was founded in **2003 in Bologna**, in the heart of a district with a strong technological vocation that is known worldwide as “**packaging valley**” for the revolutionary scope of the huge amount of machines that are conceived, produced and sold throughout the world. Ecocap's was born from the experience of the Cassoli Group which **since 1964** invested its know-how in the design and marketing of packaging machines.

In this background lies our strength. Not only because we can boast a truly unique experience in the field of **advanced mechatronics** for **packaging** but above all because the **continuous research** and **application of new technology** is the basis of our DNA. **Our mission** is to look beyond packaging as a simple container and make it an integral part of the product **adding value to the marketing of each brand.**

Discover the patented Ecocap's system for sealing cans with **TOPSYL®** that is revolutionizing the world of beverage.

TOPSYL
the thin difference

TOPSYL® is the novelty that more and more consumers are looking for and of which the big brands can no longer do without.

TURN YOUR
CANS INTO A
POWERFUL
INSTRUMENT
OF
MARKETING!

THE **PACKAGING REVOLUTION** IN THE CAN IS AN EXCLUSIVE **ECOCAP'S PATENT.**

The revolutionary patent filed by **Ecocap's** that sets a new standard in can packaging. A complete system ready to use that can be applied to any type and format of drink in a can. **TOPSYL®** is a seal on the opening of the can which, thanks to our exclusive technology, becomes much more than just safe protection.

Simple doesn't mean **easy!**

The system consists of a machine that fixes the **TOPSYL®** on the can. Heat-welded **aluminium** foil on a aluminum can: all without the use of glues, or any other material, for the benefit of **hygiene, cost-effectiveness** and **100% recyclability** of materials.

it is a gesture of care and attention towards
your clients.

it is a sign of attention.

it will assist your customers.

it is a way to say that your brand is Eco-friendly.

it is an extra service for your sales network.

CREATED TO BOOST YOUR **MARKETING**, DESIGNED TO BE **INTEGRATED** IN YOUR PRODUCTION LINE

The machines that apply **TOPSYL®** have been designed for perfect integration with existing packing lines in all kinds of companies: from large multinationals to small artisanal workshops.

The machines for applying **TOPSYL®** are in fact designed to fit perfectly into the packaging lines of every type of company: from the large multinational to the small craft producer.

HIGH PRODUCTIVITY, HIGH EFFICIENCY

The machines for heat sealing are characterized by reduced dimensions and high efficiency in order to be integrated in all production lines, without limitations.

Up to 25,000 pcs/h

CSS 648
Up to 55,000 pcs/h

CSS 760
Up to 75,000 pcs/h

1.

PERFECT SEAL WITH A ZERO SIZE

It is much more than a cover: it is the “second skin” in aluminum that adheres to the can and seals the entire surface of the can on the opening side throughout its life cycle.

2.

SAFETY

TOPSYL® protects the cans as soon as they are filled, safeguarding the product, the consumer and the producer.

3.

STOPS MOULD AND BACTERIA

TOPSYL® does not allow the formation of humidity between the protection and the can, therefore it prevents the formation of mould and the proliferation of bacterial flora.

4.

FLEXIBLE, COMPLETE, PATENTED

The complete system consists of an automatic machine that applies a **TOPSYL®** to each can, adapting to all production layouts and working on cans of any size.

5.

NEW MARKETING TOOL

The upper part of the can becomes a targeted and differentiated means of communication by market, distribution channels and customer.

6.

SPACE FOR YOUR PROMOTIONS

As you can print on both sides, **TOPSYL®** is the ideal for communicating promotions, targeted initiatives or an ideal tool for “buy and win - instant win” operations etc.

7.

RESISTS WATER AND HEAT

TOPSYL® protection is also tested for immersion in water and ice and high temperature resistance, up to 60° C, it is therefore possible to distribute cans in “hot” or “cold” vending machines.

8.

100% RECYCLABLE

Ecological and **100% recyclable**, **TOPSYL®** guarantees a packaging with a very low environmental impact: fixed to the can, in aluminium and recyclable.

9.

IDENTIFIES CANS

TOPSYL® can be impactfully customized, so it allows you to effectively communicate image and added value of beverages by making cans recognizable when looking from above.

10.

NO BOND FOR SALE

The cans remain protected from the production site until the consumer, so they can be moved, stored and presented for sale without special precautions.

THE THIN
DIFFERENCE
IS ALL IN ITS
10 POINTS
OF STRENGTH
