

BRINE PREPARATION

BRINE PREPARATION

The GAROS GLB is the one and only brine mixing machines designed to handle a large variety of ingredients. Brine and marinade recipes, recently, have been modified to include a higher level of additives and more difficult to dissolve, ingredients/ dry substances. This has increased preparation requirements in relation to handling, mixing, and dissolving the ingredients. The GLB is available in sizes 500, 1000, 1500 to 2000 litres. The tank is made of 316 acid resistant stainless-steel.

There are numbers of brine mixers on the market, which all look similar and claim to be perfect at handling a large variety of ingredients. There are, however, some significant differences between them and the GAROS GLB when it comes to functioning.

The Garos GLB is the only brine mixer specially designed to handle a long list of ingredients:

1. The feed hopper is suspended on a spring supported cradle with a pneumatic vibrator which creates a continual flow of ingredients, reducing the chance of clogging.
2. The 4" (102mm) diameter valve on the base of the hopper also ensures a good continuity of ingredient flow.
3. The powerful high shear pump fitted to the GLB not only works to dissolve the ingredients quickly, at the same time creating a vacuum at the base of the hopper drawing in the dry ingredients, also creating a high-speed circulation of the brine throughout the GLB. The pump also guarantees a homogenous mixture even with the most viscous brines. This pump can also be utilised to pump prepared brines to the next step in their process.
4. Conical shaped base - 100% of the brine is utilised.
5. Control panel - a 4' touch screen giving the ability to program the entire brine preparation.

BRINE MIXER ADVANTAGES

► PNEUMATIC VALVE

full integration ability allowing automatization and control of brine preparation to prevent run off as well as a transport ability to connect the brine mixer with the injector, tumbler or brine holding tank GLT.

► INFEEED HOPPER

equipped with a vibration motor to make the feeding of ingredients easier.

► ACID-RESISTANT STAINLESS STEEL

the inner tank and hopper are not susceptible to corrosion, necessary while mixing liquids containing salt.

► FULL INTEGRATION ABILITY

connection with other machines to give even better performance.

► CENTRIFUGAL PUMP

Guarantees homogeneous mixture with viscous brine.

► AUTOMATIC LEVEL SENSORS

for continuous transport of brine to external container.

► COOLING JACKET

covers the entire surface area of the tank allowing for control of the brine temperature, when connected to glycol cooling system. The jacket and base have 50 mm insulated walls.

► EFFECTIVE LARGE PROPELLOR

agitator combined with low rotation speed keeping ingredients in suspension at the same time preventing foaming.

► CONTROL PANEL

a 4' touch screen which gives you the ability to program the entire brine preparation.

► TEMPERATURE SENSOR

allows operator to set temperature of the brine when connected to glycol cooling system.

► AUTOMATIC WASHING SYSTEM

makes maintaining the proper hygiene levels easy.

► LOAD CELLS/FLOW METER

full control of set recipe as well as the flowing liquid quantity.

BRINE PREPARATION

STORAGE TANK

The GAROS GLT storage tanks are utilised to store premixed brines at a controlled temperature prior to being pumped to further processing. They are available in sizes 1000, 1500, 2000 and 3000 litres.

The tank is made of acid-resistant stainless-steel SIS 2343/AISI 316/En. 1.4436. This is a necessity when mixing and storing liquids containing salt.

The GLT has the following options:

► **AUTOMATIC LEVEL SENSORS**

for continuous transport of brine to external container.

► **COOLING JACKET**

covers the entire surface area of the tank allowing for brine temperature control, when connected to glycol cooling system. The jacket and base have 50 mm.

► **PNEUMATIC VALVE**

with automatic shut-off after the brine been pumped to prevent runoff.

► **CONICAL SHAPED BASE**

ensuring 100% the brine is utilized.

► **AGITATOR**

effective large propeller combined with low rotation speed keeping ingredients in suspension at the same time preventing foaming.

► **TOUCHSCREEN & AUTO CLEANING**

4" touch panel with built-in washing system simplifies operation and hygiene maintenance.
