PRODUCTS

We offer comprehensive range of spout caps. Pull-out spout caps are designed for precision pouring in edible oil packaging. These caps ensure controlled flow, reduce spillage, and enhance hygiene. Their tamper evident features guarantee product safety. Easy to use and reseal, they improve consumer convenience while maintaining product freshness, making them ideal for modern edible oil applications.

The CTC cap with two flow options—flower cap and dual flow—offers versatility and controlled dispensing for edible oils. The flower cap ensures gentle, precise pouring, while the dual flow allows faster dispensing when needed. Its user-friendly design enhances convenience, reduces spillage, and ensures hygienic, efficient usage in daily cooking.

Our single-piece CTC cap is a compact, lightweight solution designed for cost-effective edible oil packaging. Its smaller size reduces material usage, offering a more economical option without compromising functionality. Easy to use and tamper-evident, this cap ensures secure sealing, efficient pouring, and affordability for value-driven brands and consumers alike.

Apart from the edible oil segment, we are proud to serve India's dairy industry by manufacturing 38 mm HDPE caps for flavored milk bottles. These caps can be customized to meet specific client requirements. We also offer a variant with a notch, designed to make the induction wad easier to tear for enhanced user convenience.
