A bite-sized  
difference makes  
**A BIG IMPACT**

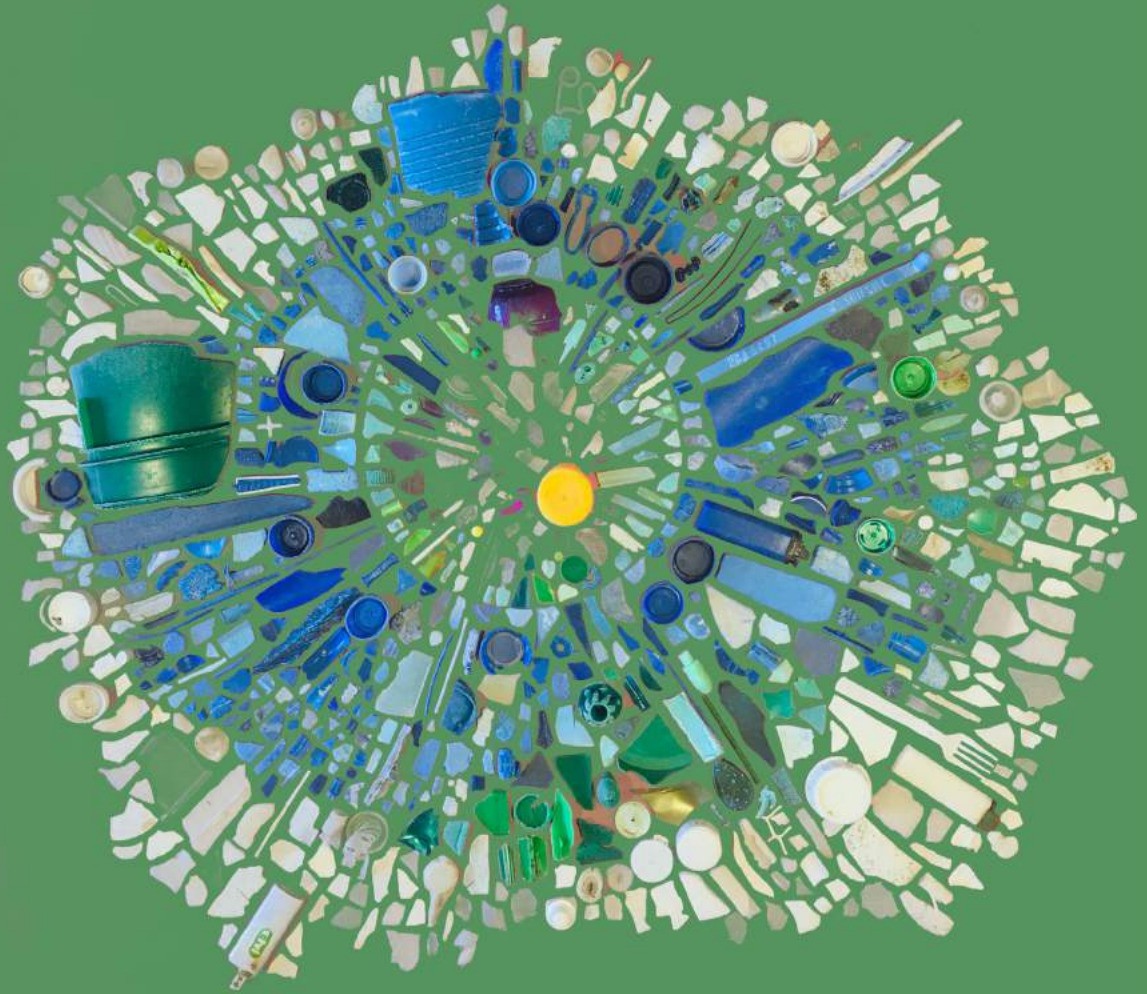

## Our Mission

We aim to contribute toward solving the plastic problem by offering a range of earth-friendly and 100% biodegradable tableware. With the purpose of helping the world become single-use plastic-free, we aim to take a collaborate step towards conscious consumption.

## Our Vision

BIOPAPRO promotes an eco-conscious lifestyle that begins with a small change in the hope that a chain of small steps has the potential to create a circular economy- one that endorses the reduction of waste and recycling materials during production.

# Leading change The Biopapro way

Reduce your ecological footprint with sustainable tableware to take a collective step towards environmental cognizance.

Due to rise in demand, we have been able to expand:

**400%**

Our capacities  
by almost 400%

**300+** Tons

Producing more  
than 300 Tons of  
wooden cutlery  
per month

**6500** Kgs

On an average  
we are reducing  
6500 Kgs of plastic  
usage per day

# Why us?

Startup India  
registered

Shipped across  
18 countries

Made from natural  
raw-material

Made in India by  
Rural Women

In-House  
manufacturing

Experienced and  
Dynamic Team

Customized  
Packaging

Available for you  
personally

Widespread logistics for  
delivery across the world

There is more plastic in the sea than wildlife.

The solution? Our sustainable table-ware.

100% compostable

Food contact safe

Microwave, Oven & Freezer friendly

Water and oil resistant

Strong and sturdy

100% bio-degradable

Neutral smell and taste

Chlorine-free, non-toxic and hygienic

Super smooth surface

# The Change Makers

In India, the unemployment rate for women in urban area is 10.1%. Here's how we are taking a step to solving this problem.

Made by a  
dedicated team of  
over 380 people

70% of the staff  
are women

Helping rural  
Indian women  
uplift themselves

# India's Largest Manufacturers Of Wooden Cutleries and Paper Straws

**Here's what sets us apart**

## **Produced 1.1 Billion pieces of wooden cutleries this year**

# Wooden Cutleries

## Birchwood Climate conscious cutlery

35% of eco-conscious consumers are driving demand for eco-friendly products.

Our eco-conscious products are made using birch wood.

↳ 450 Tons of wooden cutlery being produced every month

↳ It is not only durable, splinter-free, and sturdy, but also earth-friendly.

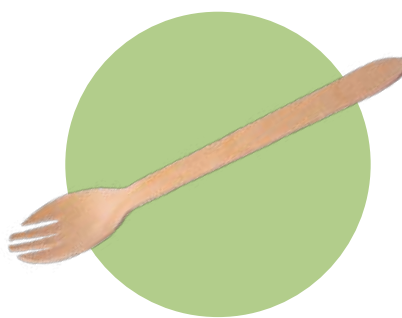

Browse our eco-friendly line of fully compostable single-use products which are 100% natural.

## **Biopapro:** A One-Stop-Shop Offering Sustainable Alternative Over Single-Use Plastic

**P**lastic cutlery is everywhere and most of it can be used only once. Billions of forks, knives, and spoons are thrown away each year. Unlike other plastic items—such as bags and bottles—cutlery can take centuries to break down naturally, giving the plastic waste ample time to work its way into the environment. To top it all, plastic cutlery is a cheaper go-to resort over other sustainable options and hence sometimes, the most obvious choice. Around 700 species are put in danger of extinction with an average of 6 million tons of non-durable plastic dumped into the sea! In short we are killing the ocean, one plastic cutlery at a time. On being made aware of the eye-popping stats, none of us need plastic cutlery delivered or be anywhere around us, however, plastic comes up anyway, by default by way of an unconscious and wasteful habit.

Against this background, the founders at Biopapro, Yash Chandan & Nikunj Bhansali, witnessed an ever-rising demand in the untapped market of plastic alternatives coupled with a dearth of supply and a subsequent ban on the sale and use of plastic in major states of India. There was no denying that they very evidently saw the vitality of a start-up that was environmentally cognizant and was convinced to make a difference that can shift the trajectory of collective impact. Carrying forward the same intent, BIOPAPRO was founded in 2019 in a B2B model, to provide for a one-stop solution for manufacturing of wooden cutlery, sugarcane-based tableware, and paper straws that will put an end to the use of plastic in our day-to-day meals.

Working in a B2B model, Biopapro produces enough to sustain its growth and provide to the wholesalers

Having conceptualized Biopapro consisting of a 3 people team in March 2019, it straight up dived into paper straws which we proudly call the “Biosips”. The business blew up exponentially and the founders just knew they had to expand and become full-time manufacturers. Biopapro is currently staying focused on the export market and has its offices in Europe (Germany). “There

is a huge scope for expansion in the market in India and abroad. The European Union is going for a Pan Ban over the use of single use plastic and the other nations like the US are planning to cut down on consumption too. These are enough signs that prove big opportunities are coming our way and we are all set to clamp on it”, says Nikunj.

### **Thriving with Innovation**

Biopapro, with the strategic expertise of Kushal Bhansali, one of the partners of Biopapro, has established its third manufacturing plant, overwhelmed by the response that it received. Working in a B2B model, Biopapro produces enough to sustain its growth and provide to the wholesalers. It is catering to all industry kinds – hospitals, catering businesses, schools, airlines, etc. The quality of the products is the main USP at Biopapro. It manufactures high-quality paper straws that can withstand longer durations.

### **Aspiring to Set New Benchmarks**

Nikunj says, “Today, we have a team of over 275 workers, with over 78% of them being women and are currently catering to international market standards with a daily production capacity of 2.2 million cutleries. Nothing makes me happier than putting India on the global map for sustainable cutlery and a good day is nothing short of how empowered I feel with the woman dominance at the factory.” Adding to the pride, it claims to have never lost a customer in the business course, keeping them happy with the products and services offered. Investing more into marketing and targeting more production, Biopapro aspires to be number one in the entire industry.
