Mini Catalog

Taking Care

In a small items in our drawings and quotation you will find precisely described every single aspects has been considered in order to avoid any possible misunderstanding.

Peace of Mind

Our shelving system have a 10 years warranty period against any manufacture or installation defects(only when the assembly work has been carried out by IRack.) We commit to supply our customers with interchangeable spare parts atleast during the first 10 years and/or offer The client a flexible solution to the installation.

Self Support Racking

This system is manufactured and installed with the entire component like it is ready to use, so customers don't need to do anything to use The warehouse.

Radio Shuttle Racking

All Radio Shuttle system components have been designed, engineered and manufactured by one company from the ground up to function as one system. A sophisticated system, yet easy to use.

Selective Pallet Rack

In order to store palletised products, iRack®, with its wide experience as a racking manufacturer, has developed an extensive range of accessories which enable the most demanding of storage needs to be met.

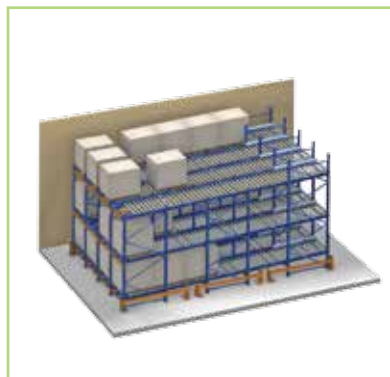

VNA Racking.

iRack® Very Narrow Aisle Racking consists of the same basic components as conventional racking but with runs placed closer together eliminating the wasted space of a wide aisle.

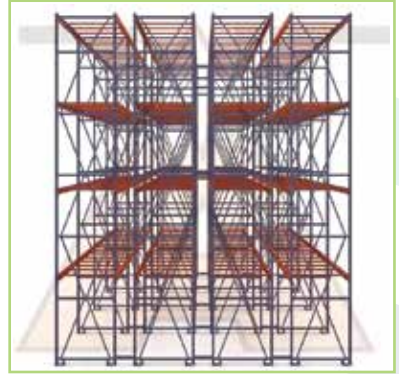

Flow Racking

Specially constructed lanes of inclined tracks are stacked side by side and on top of each other, within a pallet rack framework. This system forms a solid block of storage that is fed from one end and travels by gravity for unloading at the other end.

Double Deep Racking

Double deep racking is created by placing 2 double sided runs together. Pallets are stored 2 deep and are accessed using special trucks with pantograph or telescopic forks.

Drive-In Racking

Drive - in racking is designed for the storage of homogenous products. It accommodates a large number of pallets for each SKU. This system makes better use of the available surface and height space than any other.

Mezzanine Floor

A mezzanine floor is an intermediate floor which is built between two main floors or the floor and ceiling of a building. They are designed to cover a specific area of a building rather than extending over the entire floor space.

Long Span Shelves

It is fast and very easy to assemble and use a modular design with a bolt free lock-in system which require no special tools giving you maximum storage in minutes whatever your available space.

Light Duty Shelves

Slotted Angle Shelving

Nickel chrome

Bolt Free

Mobile Shelving

Is the solution that allows up to 50% saving in space thanks to the elimination of passages between the rows of shelves , or to make the most of the available surface area , almost doubling storage or archiving capacity .

Vertical Carousel

iRack® provides vertical carousels to increase storage density, throughput, and efficiency while reducing inventory, and man-hours. Computer controls are integrated into the carousel system allowing you to perform a wide range of activities from simple transactions to full inventory control.

Lockers

Lockers are usually physically joined together side by side in banks, and are commonly made from steel, although wood, laminate, and plastic are other materials sometimes found.

Manual stacker

Ramp

Mobile yard ramps with IRack® loading and unloading Lorries and containers under high time pressure, Is the day – to –day business of modern logistics. For decades IRack® Mobile loading ramp have safely and conveniently completed this task.

Dock Levelers

The meeting point between vehicle and loading bay is more important in the material handling chain today than ever before. iRack® stationary dock levelers are an absolutely safe means of filling this gap. By using this technology, a vehicle can be loaded or unloaded in less than 9 minutes by only one person using a lift truck.

Fixed Elevator

These heavy duty scissor lift elevators are ideal for cargo handling and lifting heavy industrial loads built in hydraulic overload relief protects personnel and structures . Heavy plate platforms with structural reinforcements minimize deflection while the wide base provides increased rigidity and stability
